## 7000-260 Maxitrol GV60 Wall Touch Pad

You will receive the touch pad, the wall plate, mounting screws (2), and forty feet of cable. You will need a small phillips screwdriver and small flat blade screwdriver to install the touch pad.

### INSTALLATION:

1. Mount the touch pad the wall using a small phillips screwdriver the two screws included with the kit.
2. Connect the cable to the touch pad using the black connector on one end of the cable.
3. Using a small flat blade screwdriver, screw the wall plate to the touch pad (the screws are already in the wall plate for this purpose).
4. Plug the other end of the cable into the receiver as shown on the next page.

### OPERATION:

The wall pad can be turned on by pressing and holding the center button until you hear a short beep. Release the button. Continuing beeps confirm the ignition sequence and the pilot should light. **WARNING: If the pilot does not light after several tries, turn off the gas.**

Use the up and down arrows to increase or decrease the flame height. To turn the flame up or down, press and hold down the large of small flame button. To fine tune the heat output, tap and release the up or down buttons. To set to pilot flame, continue to hold down the down button.
